Install the Fixture

- 1 With the provided Allen wrench, remove the set screws both sides of the fixture base.
- 2 Remove the mounting plate from the fixture base.
- 3 Connect the negative (-) fixture wire to the negative (-) driver output wire with a wire nut.
- 4 Connect the positive (+) fixture wire to the positive (+) driver output wire with a wire nut.
- 5 Connect the fixture to a suitable ground in accordance with local electrical codes.
- 6 Connect the white driver wire to the neutral power line.
- 7 Connect the black driver wire to the hot power line.
- 8 Use the pink/gray and purple dimming wires for 0-10v dimming application (if not in use, make sure to cap these wires off).
Warning: The purple and gray wires are only used for 0-10v dimming. For all other applications, do not connect the gray and purple wires.
- 9 Properly place the driver, all wires, and wire nut connections into the junction box.
- 10 Install the mounting plate to the junction box with the two #8-32 screws provided.
- 11 Verify that the mounting plate is level before continuing. Line up an anchor tip with the center of an anchor hole, and push the anchor into the wall up to the threads.
- 12 Screw the anchor in the rest of the way with a Phillips-head screwdriver. Repeat for the other anchor hole.
- 13 Slide an anchor screw through a washer, and screw it into an anchor to secure the fixture base to the wall.
- 14 Mount the fixture back onto the mounting plate and reinstall the set screw (reversal of step 1A).
- 15 For wet locations, caulk around the fixture base with waterproof construction sealant.

Note for In-Line Fuse equipped fixtures: in the case that the fixture is not operating correctly, make sure to check the fuse.
